# Plan early to get the variety and rootstock combination of your choice

Here at Hutchinsons we recognise how difficult the previous 6 - 8 months have been for your trees and yourself. Whether you are looking to gap up or are planning your next orchard planting, getting the right trees is crucial.

In order to help with this we are working hard with our tree supplier Carolus to be in a position to provide replacement trees as quickly as possible. We have been working with Carolus Trees for a number of years and are proud to be their UK Agents, as their commitment to quality and customer satisfaction aligns with our own.

The grafting period for production of interstock trees for planting season 2021/22 will come to a close in August, so if you are looking to replant or have gapping material available, now is the time to book your requirements. There is also stock of some varieties available for planting season 2020/21.

**About Carolus** - Carolus themselves have a clear goal: to grow the best fruit trees that provide fruit growers with maximum yields. They are successful in accomplishing this aim by constantly seeking out and introducing new ways of perfecting their products. Thanks to the long-standing know-how of their passionate team, our fruit growers get to benefit from their expertise.

Quality stands out - Carolus understand fruit trees inside out, from root to fruit. In recent years, they have even managed to grow trees that have 10 fully-fledged branches, which has seen Carolus exceed the highest standard (AA7+).

The Carolus slogan 'cultivated for your success' is a fitting description of their commitment to your fruit trees.

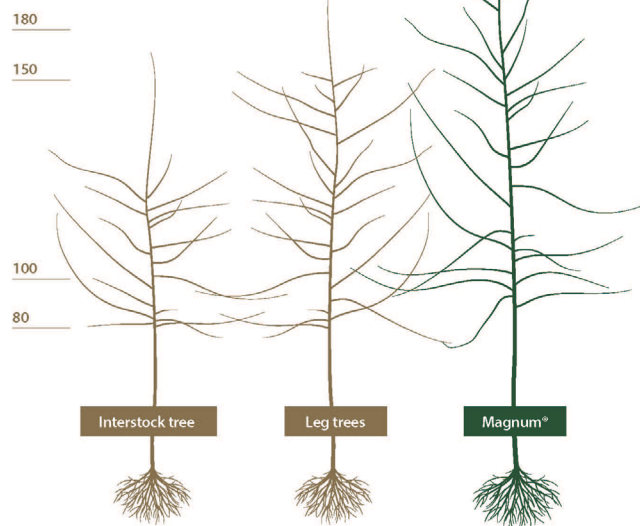

The Carolus dedication to producing great trees is shown in the MAGNUM® tree. A new tree type patented by Carolus Trees, which accelerates and maximises the production volume in fruit from the time of planting.

The MAGNUM® tree saves on time, effort and costs for pruning, binding and fertilising, and is typified by:

- a height of at least 2.5 metres
- a crown of productive branches at 3 levels for optimum exposure to light
- the uncut main trunk that continues to grow

### The MAGNUM® apple tree

Comprehensive tests by Fruitconsult showed that, courtesy of their large tree volume, the MAGNUM® trees generate 25% more fruit than a leg tree in the first 3 years. In addition, the trees yield excellent quality fruit. Which means the added cost of the MAGNUM® apple trees is already recouped as early on as the 2nd year of production.

**fruit trees cultivated for your success**

If you are interested in replacement trees we will be happy to work with you to provide your requirements. Please complete the details below and send back to your usual contact or Chris Williams at **chris.williams@hlhlt.co.uk**

We are able to offer a number of apple and pear varieties from Carolus (see [www.carolustrees.com/en/trees/](http://www.carolustrees.com/en/trees/)) or Carolus can produce other varieties if you are able to provide healthy budwood.

We are also able to source stone fruit trees if you are looking for these.

### PLANTING SEASON

- 20/21 - Enquire for current stock
- 21/22 - All varieties as described on interstock Golden with M9 rootstock or
- Rootstock of choice as 1 year unfeathered tree
